

Malaysia KEX Sdn Bhd - Software Application Support Overview

Role Overview

Over 2 years experience on providing **Level 1 & 2 support** as Software Application Support while collaborating with **R&D** and **CRM** teams to align solutions with business strategies. Daily routine tasks include granting privileges/credentials to users and user requests to pull raw data via FTP through the Zendesk ticketing system. Shift rotation tasks in the morning include monitoring server activity and night shift focus on testing UAT before deployment to align with business downtime.

Job responsibility on troubleshooting & diagnosing root cause on web & MPOD app mobile bug issue through .NET framework C#, modify MSSQL stored procedure through remote application IIS server, contribute on UAT testing using web browser tools among a variety of browsers before deployment.

Skills

- **MS SQL:** Database optimization, performance tuning and troubleshooting.
- **Remote Troubleshooting:** Resolving & escalated bug report on different machines Window/Mac through users remote support anydesk. Provide privileges support to users credentials when necessary.
- **AWS:** Grant access NAS backup server and remote server SQL backend maintenance.
- **IIS Connection Pool:** Configured and optimized for stored procedure performance and check job tasks.
- **API Integration:** Tested and automated with Restful API **Postman tools**, creating **JSON** formatted requests.
- **.NET MVC:** Visual Basic Studio IDLE to troubleshoot and test applications while debug with C#.
- **Testing:** UAT tests follow PCR requirements involving web/mobile testing using web browser developer tools before deployment.

Most common issues & solution

IT teams do face data synchronization issues from major changes in backend structure whenever we deploy some patches which affect our services & product delivery to users.

We production team do hotfix patches missing data for first level clients to ensure smooth operation within a short amount of time until the dev team fix the issues for a long term solution.

Meanwhile the production team gathers customer feedback and finds the sources of the issues and escalates to the dev team.

Provided training for clients and stakeholders by sharing documentation issues and solutions for users to prevent the same incident recurring.

Documentation

- Utilized **Google Drive** for document sharing among , providing transparent and easy-to-access documentation.
 - Utilized **Zendesk** for efficient tracking and management of support requests.
-

Knowledge on Friddle, ETL, SSRS

Knowledgeable in **Friddle** investigator, **ETL (Extract, Transform, Load)** systems, and **SSRS (SQL Server Reporting Services)**, aiding in data processing and reporting needs.

Key Achievements

- Collaborated with internal teams to ensure alignment on goals and efficient task execution.
- Provided effective solutions to optimize logistics operations and improve system reliability.

Shift duty & daily task routine

Morning shift people do require monitoring job tasks & check on server health and ensure all server jobs are running.

Night shift person duty is UAT testing with the developer team and escalating issues found through Zendesk ticketing system.

Picture 1 shows daily manually pull FTP raw data from server for CRM dept cross check

Most common issue

Due to minor changes on database system structure after deployments, our side is unable to launch API to our client Lazada/Shopee and causes potential losses to them. After gather CRM feedback from clients missing data, IT team needs to find the root cause which is out the system had outdated user credential on the system after deployments that cause us unable to send API to our client.

The screenshot shows a Notepad++ window titled "D:\SMART EDI\Logs\EDI_WEBAPI\Log\Event\Evn20230724.txt - Notepad++". The log file contains several entries for API requests to ShopeeSmartEDIController.createprequest. The entries show timestamps, tokens, and request details. A search pane on the right shows results for "SHPP2483621FMYT" (1 hit in 1 file) and "SHPP22673017FMYT" (1 hit in 1 file). The search results pane also shows "SHPP42243606FMYT" (0 hits in 0 files), "SHPP42243606FMYT" (0 hits in 0 files), "SHPP230143566" (0 hits in 0 files), "SHPP230143566" (0 hits in 0 files), "SHPP68415007FMYT" (1 hit in 1 file), and "SHPP68415007FMYT" (1 hit in 1 file).

Picture 2 shows a log file failed post API to clients due to invalid token after deployment.

MSSQL

The screenshot shows a SQL query in a database tool. The query is a complex JOIN query with various filters and a results pane. The query is as follows:

```
SELECT * FROM Consignment_Tracking ct WITH (NOLOCK) ON ct.Consignment_ID = c.ID
LEFT JOIN Consignment_No cn WITH (NOLOCK) ON cn.Consignment_No = ct.Consignment_No
LEFT JOIN System_Status ss WITH (NOLOCK) ON ss.ID = c.Last_Status_ID
LEFT JOIN Master_Route mr WITH (NOLOCK) ON mr.ID = c.Last_Route_ID
LEFT JOIN Master_DC mdc WITH (NOLOCK) ON mdc.ID = c.Destination_DC_ID
LEFT JOIN Consignment_Surcharge_Return csr WITH (NOLOCK) ON c.Consignment_No = csr.Consignment_No
-- OUTER APPLY (SELECT TOP(1) cp.* FROM Consignment_Picture cp WITH (NOLOCK) WHERE cp.Consignment_ID = c.ID ORDER BY Created_Date DESC ) cp
WHERE c.Active_Status = 'Y'
AND ss.Active_Status = 'Y'
AND mr.Active_Status = 'Y'
AND mdc.Active_Status = 'Y'
AND (ISNULL(c.COD_Amount, 0) > 0 OR ISNULL(c.FOD_Amount, 0) > 0)
AND ISNULL(c.COD_Collected_Amount, 0.00) > 0.00
AND c.COD_Collected_DateTime >= DATEADD(MONTH, DATEDIFF(MONTH, 0, GETDATE()) - 7, 0)
AND ct.Status_ID IN (SELECT ID FROM System_Status s WITH (NOLOCK) WHERE (s.Status_Code = 'FODC' OR s.Status_Code = 'CODC') AND s.Active_Status = 'Y')
AND c.COD_Verified_DateTime IS NULL
AND c.Consignment_No LIKE 'BXK05132219338'
```

The results pane shows the following data:

Consignee_Name	Consignee_Email	Dest_DC	Delivery_Route	Last_Status	Est_Del_Date	Manifest_Date	Paid_DateTime	Transaction_ID	COD_Amount	FOD_Amount	Total_Expect
DANI	my.ops.cod.d@kex-express.com	IPH	IPH49VP	DPM	2023-08-08	2023-08-01	2023-08-02 15:48:57.000	T011574114323	81.65	8.35	90.00

Company Overview

KEX Express (formerly ABX Express), a Malaysian courier service provider based on Subang Jaya HQ, offers both domestic and international express delivery services, with a strong focus on e-commerce and retail.

History and Transformation:

ABX Express, founded in 1984, became KEX Express after rebranding in 2022.

Ownership and Network:

KEX Express is part of the Kerry Logistics Network (KLN) and is a global agent of SF International.

Services:

Domestic: Offers fast shipping solutions with same-day and next-day options, including convenient drop-off services.

Value-Added Services: Offers services like SMS delivery notifications, real-time track & trace, and high-value handling.

Business Focus:

B2B: Offers services for businesses, including API integrations and a Seller Centre.

B2C: Provides services for individual customers, including digital cash on delivery (COD) and digital freight on delivery (FOD).

Conclusion

Bringing self value of human centric toward client to optimal customer satisfaction for our services to which bring value to company
